We are dedicated to working with our customers to understand what's most important to them, and then working hard to provide a services. It is our versatility that allows us to deliver to such a wide range of customers around the world.

Mission

“ **Quality is our growth** ” our mission is to design, install and support innovative products / solutions that delivers maximum satisfaction.

Vision

A Company of High professional and Latest Technologies , addressing the client needs in time and to their satisfaction.

Types of wireless solutions

Point to Point Wireless

Point to point wireless network links connect two locations together through line of sight (LOS), operating in unlicensed / licensed radio frequencies or through free space optics with speeds available between 100mbps to 10Gbps.

Typical Point to Point applications are :

> Building to building connectivity. > Leased line replacement. > Fiber line replacement > Wireless failover

Point to Multi Point Wireless

Point to Multi Point wireless networks, also used for outdoor hotspots, interconnect multiple locations to central access points through line of sight and non line of sight (nLOS). A point to multi point wireless network can be a highly cost effective replacement for leased lines.

Typical Point to Point applications are :

> Connecting multiple buildings. > Lease line replacement. > Fiber replacement. > Outdoor WiFi

WLAN Wireless Mesh Network | WiFi Coverage Solutions

Wireless mesh networks provide a self-configuring, scalable, and self-healing wireless network capable of extremely high concurrent connections. Mesh networks are ideal for large outdoor, or high capacity environments as they can scale to many kilometres.

Typical Point to Point applications are :

> Public WiFi. > Campus wide broadband. > Campsite WiFi > Locations that can't be cabled. > Stadiums / halls
